

Verifying CMS versions

WordPress version:

Linux/cPanel:

```
find /home/*/public_html/ -type f -iwholename "*/wp-includes/version.php" -exec grep -H "\$wp_ve
```

Linux/Plesk:

```
find /var/www/vhosts/*/httpdocs/ -type f -iwholename "*/wp-includes/version.php" -exec grep -H "
```

Windows/IIS (default path) with Powershell:

```
Get-ChildItem -Path "C:\inetpub\wwwroot\" -Filter "version.php" -Recurse -ea Silentlycontinue |
```

Joomla! 1/2/3 version and release:

Linux/cPanel:

```
find /home/*/public_html/ -type f \( -iwholename '*/libraries/joomla/version.php' -o -iwholename
```

Linux/Plesk:

```
find /var/www/vhosts/*/httpdocs/ -type f \( -iwholename '*/libraries/joomla/version.php' -o -iwh
```

Drupal version:

Linux/cPanel:

```
find /home/*/public_html/ -type f -iwholename "*/modules/system/system.info" -exec grep -H "vers
```

Linux/Plesk:

```
find /var/www/vhosts/*/httpdocs/ -type f -iwholename "*/modules/system/system.info" -exec grep
```

phpBB version:

Linux/cPanel:

```
find /home/*/public_html/ -type f -wholename *includes/constants.php -exec grep -H "PHPBB_VEF
```

Linux/Plesk:

```
find /var/www/vhosts/*/httpdocs/ -type f -wholename *includes/constants.php -exec grep -H "PHPE
```
